Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133).
- Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☐ Responsive to communication(s) filed on ____.
- 2a) ☐ This action is FINAL. 2b) ☒ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

DETAILED ACTION

Information Disclosure Statement

1. The Information Disclosure Statement(s) received 01 August 2002 has been considered.
Please see the attached PTO-1449(s).

Drawings

2. The drawings filed on 04 April 2001 have been approved by the Examiner.

Specification

3. The title of the invention is not descriptive. A new title is required that is clearly indicative of the invention to which the claims are directed.
4. Applicant should update the status of the application on page 1 of the specification, as appropriate.

Claim Rejections - 35 USC § 102

5. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

6. Claims 1-6 are rejected under 35 U.S.C. 102(b) as being anticipated by Quattromani et al. (5,471,598).

Art Unit: 2188

As per claims 1, 3, and 5, Quattromani et al. teaches a unified cache memory 70 which stores data ("data cache") attached to a write buffer 27 ("bypass system"). See figure 4. The write buffer includes two latches, 162x and 162y, which output values to the cache ("two ports to the data cache"), a plurality of write buffer entries, 152x0-x5 and 152y0-y5, ("registers for multiple data entries"), a bus connecting the write buffer 27 with the core 20, and write buffer control logic 150 ("address matching and switching logic"). Each write to the memory or cache (including write hits) are stored in the write buffer 27 ("characterized in that write operations that hit...written to the data cache"). See column 3, lines 20-22. Furthermore, reads after writes are compared in the write buffer control logic and if a physical address of data stored in an entry of the write buffer 27 matches a physical address of a read operation from the core (see column 21, lines 32-39), then it is determined if the entry or entries are bypassable (see column 22, lines 42-60). If the entry is bypassable, then a process is performed by the write buffer control logic 150 to enable the sourcing of contents of the data portion of the write buffer entry directly to the core 20 ("read operations use the address matching logic...stored in the data cache memory array"). See column 22, line 65, to column 23, line 3, and figure 11. It is noted that each write of an entry in the write buffer to the data buffer results frees the ports to be used in further write operations.

As per claims 2, 4, and 6, Quattromani et al. teaches 6 distinct entries (i.e. 152x0-x5) and 32 bits of data storage (see column 9, lines 52-53).
